

Feature List For Fintech Application v1.0

Our Understanding

The objective of the project is to design and develop the fintech application.

Scope

Following is the breakdown of features portraying our grasp on the key features as shared in the requirements document along with some suggestions to enhance the system's overall functionality.

User Panel

There will be 3 user panels in this application

- User App - iOS /Android
- Merchant/Vendor – iOS/Android
- Admin – Web-Based

Features for User App:

- Sign up –Mobile number/Email address and Password
- Login – Mobile number and Password.
- Onboarding
 - Add the domestic cards/Accounts
 - Set up the PIN for money transfer
- Scan the merchant's QR code and send the amount to the Merchant.
- View the transaction history details.
- Raise a query against the transactions.
- Manage profile – Edit profile, add/remove accounts, update password.

**Features for Merchant/Vendor App:**

- Login – Mobile number and Password.
- Onboarding
 - Add an account to receive the payments.
- View recent transaction details.
- QR Code
- Manage the profile – Edit profile details and update password.

Feature for Admin:

- User Management – Manage all the users across the platform.
- Vendor Management
 - Create a new vendor
 - Activate or de-activate vendor.
- Transaction Management – View all transactions across the platform
- Content Management - Manage all the content across the platform.
